-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election without traverse of claims 5-8 and 19-23 in the reply filed on 12 April 2006 is acknowledged.

### ***Claim Objections***

Claim 20 is objected to because of the following informalities: In claim 20 at line 3, "maintaining" is repeated twice. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 5-8 and 19-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Reynolds.

There is disclosed in Reynolds a beverage brewing apparatus, comprising: a mixing station 42; a dispensing station (located below the mixing station); a particulate delivery component 198 for delivery of particulate substance from a removable particulate storage component to the mixing station, wherein the storage component includes a hopper (receptacle) 200 and valved wall element (lower end of hopper) to define an enclosed space for containing a particulate substance, and wherein the valved wall element includes an outflow aperture 206, a plug element 212 and a bias element 202; an aqueous medium delivery means 32, 40 for delivering hot water to the

mixing station; a particulate delivery component, wherein the particulate delivery component includes a conveyor element 232; an interconnect element 210 for releasably interconnecting the conveyor element and the outflow aperture; a valve plug interaction element 220, 228 for releasably maintaining the plug element of the valve member in an open position; and a support component (col 4, lines 71-75) for releasably engaging the removable storage component.

In regards to the particular type of particulate material, such is not definitive of any structural arrangement and is therefor not given any patentable weight.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to DiGirolamo, Ogawa et al., Meriggi, Totten et al. and Hamilton et al. are cited for their disclosure of the state of the art.
